

Course	Skills	Strongest	Weakest	GitHub Examples of Work
Data Analytics Course 1 SEM Data / Analytics	Foundations of data analytics, data mining concepts, social network analysis (SNA), and social media analytics (SMA). Tools used include Tableau, RapidMiner, and Excel for data visualisation and preparation.	Data visualization, data preparation, effective use of Tableau and Excel.	Data mining concepts, executing projects and exams using RapidMiner.	 Exam1Part2Data - Analytics.xlsx
Data Analytics Course 2 Business Intelligence & Decision Support Systems	Processing large datasets, business decision-making, forecasting, and analytics workflows. Tools used include Pandas, Jupyter Notebook, VS Code, Excel, and GitHub.	Familiarity with analytics tools, basic data processing, and interpreting results for business decisions.	Advanced data preparation, handling very large datasets efficiently due to limited computing power and incomplete mastery of tools.	https://github.com/WTDeemy/DemiO-2CIDM5310.git
Data Mining & Management Course 1 Object-Oriented Analysis & Design	Database management system concepts, UML diagrams, object-oriented principles, and understanding how databases support systems. Worked with C#, Python, and SQL.	Understanding UML diagrams, conceptual database design, and object-oriented analysis.	Limited personal projects to deepen hands-on database and programming practice.	https://github.com/WTDeemy/myWebsitedemi.git
Data Mining & Management Course 2 Data & Information Management	Database systems, data management principles, data organisation, and information lifecycle management (currently ongoing) .			
Systems Development Course 1 Web Application Development	Web application development using Django, Python, and deployment platforms such as PythonAnywhere and Replit. Learned full development lifecycle and debugging fundamentals.	Understanding Django basics, building and deploying a functional website, grasp of web app structure.	Advanced debugging techniques and performance optimization.	https://github.com/WTDeemy/Demi_BlogProjectCIDM6325.git
Systems Development Course 2 Reading / Conference	Decision support systems in business, research reading, analysis, and discussion of systems concepts (currently ongoing) .			
Networking & Cybersecurity Course 1 Information Technology Management	Understanding modern information systems, current trends, and issues in IT management through readings and discussions.	Broad understanding of IT systems and current industry perspectives.	Deep technical implementation of networking systems.	 Info Tech Final.pdf
Networking & Cybersecurity Course 2 Network Management & Information Security	Network management principles, information security, and conducting security audits with emphasis on business importance. Small Business with the security audit ran were Burrowing Owl and Marsha Art Gallery	Security audit concepts, risk awareness, and security management understanding.	Advanced hands-on network configuration and cybersecurity testing.	 Art Gallery Cybersecurity Audit R  Burrowing Owl Books Cybersecurity Audit R
